

NIKITA RAI

Backend Developer

nikitarai2803@gmail.com | [+91 96782 41162](tel:+919678241162) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend Developer with 3 years of experience designing scalable microservices, REST APIs, event-driven systems, and cloud-native applications. Strong expertise in Node.js, Express.js, PostgreSQL, MongoDB, Redis, RabbitMQ, Docker, and AWS. Experienced in authentication and authorization using JWT, OAuth 2.0, and Keycloak, with a proven track record of delivering high-performance backend systems. Skilled in system optimization, caching, CI/CD automation, and real-time communication with WebSockets.

SKILLS

Languages	JavaScript (ES6+), TypeScript
Backend	Node.js, Express.js
Cloud & DevOps	AWS (EC2, S3, RDS, Lambda, CloudWatch), Docker, Terraform, GitHub Actions
Databases	PostgreSQL, MongoDB, MySQL, Firebase
Caching	Redis
Messaging	RabbitMQ, Kafka, Node-cron
Auth & Security	JWT, OAuth 2.0, MFA (TOTP), Keycloak (RBAC), bcrypt
Real-Time	WebSocket (ws, socket.io)
System Design	Microservices, Event-Driven Architecture, API Gateway, Load Balancing, Caching
Testing & Docs	Jest, Swagger, Joi, Postman
Frontend	React.js, HTML5, CSS3, Tailwind CSS
Tools	Git, Bitbucket, JIRA, PM2

WORK EXPERIENCE

Delivery Centric , Bangalore Backend Developer	July 2025 – Present
- Engineered scalable microservices using Node.js, Express.js, and MongoDB, deploying applications on AWS (EC2, S3, RDS) through Dockerized CI/CD pipelines. - Architected event-driven workflows with RabbitMQ for asynchronous message processing, decoupling services to ensure fault-tolerant, low-latency delivery. - Optimised API performance through Redis caching, reducing average response times by 40% and lowering database load. - Integrated third-party APIs and WebSocket channels for real-time market data delivery and live event-driven callbacks. - Enforced application security with JWT-based authentication, role-based access control, and an admin control layer for managing user permissions. - Streamlined CI/CD pipelines with Docker and GitHub Actions, maintaining 99.9% uptime SLA across production environments.	
Tibil Solutions , Bangalore Backend Developer	December 2023 – November 2024
- Designed microservices-based backend systems using Node.js, PostgreSQL, and MongoDB across multiple concurrent product teams. - Configured Keycloak for role-based authentication and SSO, enforcing fine-grained access controls across service ecosystems. - Established RabbitMQ-based notification workflows processing 10,000+ events daily under peak traffic conditions. - Containerized 10+ backend services using Docker, reducing deployment inconsistencies across environments.	

- Refined backend APIs with structured logging, AWS-based routing logic, and CloudWatch monitoring for accurate data retrieval and observability.
- Authored unit tests in Jest and documented REST APIs using Swagger, improving developer onboarding and cross-team collaboration.

Arteria Technologies, Bangalore | **Backend Developer**

August 2023 – November 2023

- Developed RESTful APIs using Node.js and Express.js for CRM applications, improving backend scalability and reducing API response times.
- Implemented JWT authentication and RBAC across multiple service layers, strengthening application security and access control.
- Optimised PostgreSQL queries and CRUD operations, improving data retrieval performance and transactional consistency.

PROJECTS

Coincentric — Trading Platform

Tech Stack: Node.js, Express.js, MongoDB, RabbitMQ, WebSocket, Docker, Redis, AWS | **Role:** Backend Developer | **Team:** 8 | **Duration:** Ongoing | **Company:** Delivery Centric

- Architected event-driven microservices using Node.js, RabbitMQ, and MongoDB to process high-volume trading workflows.
- Accelerated query performance by introducing Redis caching, reducing API latency and improving throughput.
- Established WebSocket-based real-time market data streaming for live price updates and trading notifications.
- Launched asynchronous notification services using RabbitMQ for order execution, alerts, and system events.
- Deployed backend services using Docker on AWS, ensuring consistent and scalable production deployments.

DCPS — Distributed Client & Placement System

Tech Stack: Node.js, Express.js, MongoDB, RabbitMQ, Socket.io, Docker, Redis, Keycloak, JWT | **Role:** Backend Developer | **Team:** 10+ | **Duration:** 12 months | **Company:** Tibil Solutions

- Devised a microservices architecture with an API Gateway for centralised routing, rate-limiting, and Helmet security headers against DDoS, XSS, and clickjacking.
- Configured Keycloak RBAC across multiple user roles, restricting data visibility at the database query level.
- Introduced a resume parsing service to auto-extract candidate data from PDF/DOCX uploads, eliminating manual data entry.
- Initiated an asynchronous notification engine using RabbitMQ and Socket.io for real-time event broadcasting to user-specific channels.

DASH — Distributed Job Search Platform

Tech Stack: Node.js, Express.js, Keycloak, PostgreSQL, Docker, Jest, Swagger | **Role:** Backend Developer | **Team:** 14 | **Duration:** 12 months | **Company:** Tibil Solutions

- Spearheaded scalable microservice APIs for job management using Beckn Protocols (BAP/BPP), enabling interoperability across multiple service providers.
- Consolidated Keycloak SSO, Joi schema validation, Jest unit tests, and Swagger API documentation across all service endpoints.

CRM — Customer Relationship Management System

Tech Stack: Node.js, Express.js, PostgreSQL, JWT | **Role:** Backend Developer | **Team:** 15 | **Duration:** 4 months | **Company:** Arteria Technologies

- Delivered a secure CRM backend with JWT authentication, RBAC, and optimised PostgreSQL queries for high-performance CRUD operations.
- Resolved data consistency gaps across services through query optimisation, modular API design, and structured error handling.

EDUCATION

Bachelor of Computer Applications (BCA)

Dibrugarh University | 2022 | 75.16%
